DR. JASON CLAIN

POST-OPERATIVE INSTRUCTIONS FOR ABDOMINOPLASTY

After Surgery

- After surgery you will have a compression wrap on
- For the drains:
 - Strip and record your drain outputs daily
 - Record how much fluid comes out of **each** drain per days (Mon, Tues, Weds, etc)
 - Bring this information to your first post-operative visit
- Wear your compression all the time, except when showering.
- You can shower 2 days after surgery. It is ok for soap and water to go on the incisions and drains.

Activity

- Walk hunched over.
 - You can stand up as straight as is comfortable without pulling. This improves with time
- Sleep in a flexed position (pillows under legs and back)
 - You can slowly flatten out over time based on comfort (removing pillows). This usually takes 2 weeks to be fully flat.
- Do not lift anything >5 pounds
- Be careful when getting in and out of bed/chair that you do not put too much pressure on your body
- Walking is good and decreases the risk of blood clots. Do not exercise or do anything that raises your blood pressure
- Exercise is not permitted for 6 weeks

Medications

- Take acetaminophen for pain, take the narcotic pain medication only for severe pain (you can also take a half pill). Ibuprofen is ok 3 days after surgery. Some patients do not need the narcotic.

A

DR. JASON CLAIN

- You do not need any additional antibiotics

What To Expect While Healing

- Bruising is normal, if you have redness that is spreading, reach out to your surgeon
- Some fluid on the dressing is normal
- The abdomen will take 6-12 months for scars and shape to fully mature

Follow-Up

- You should see Dr. Clain within 10 days of surgery. If you do not have an appointment, please call his secretary (top left)
